**CLIMATE RISK**

January 26, 2009

The Honorable Harry Reid  
Majority Leader  
United States Senate  
Washington, DC 20510

The Honorable Mitch McConnell  
Minority Leader  
United States Senate  
Washington, DC 20510

Dear Majority Leader Reid and Minority Leader McConnell:

We are over 40 treasurers, comptrollers, and institutional investors, representing over \$1.7 trillion in assets calling on Congress to swiftly pass an economic recovery package that contains significant funding for clean energy, energy efficiency, and public and clean transportation modes. These will create and retain jobs, save money, save energy, and reduce greenhouse gas emissions.

As we have now called for on several occasions, we urge you to achieve these goals by realigning national energy and transportation policies to reduce US greenhouse gas emissions, and creating policies to maximize energy efficiency throughout our economy. Before you are a range of policy measures to stimulate research, development and deployment of cleaner, more efficient technologies at the scale necessary. The economic recovery package should not pick technological winners, but rather should aim to bring forward a portfolio of technologies that both enable reductions in greenhouse gas emissions and promote America's energy security.

As part of this economic recovery package, we urge the Senate to pass longer-term economic incentives including extending the Production Tax Credit (PTC) for five years or more. A study by the consulting firm, Navigant, indicates that "historically, the PTC expiration has caused a 73 percent to 93 percent market drop to around 400 MW of annual installations." Such a market drop could potentially lead to significant job losses and reduced investments in renewable energy. Stronger federal incentives (and standards), therefore, are needed to overcome market barriers to the broader deployment of existing technologies and the development of new ones. As investors, our ability to continue to invest in the renewable energy and energy efficiency industries, and accelerate the growth of these industries, depends on a comprehensive and stable set of supportive policies, including a long-term extension of the PTC.

Moreover, as fiduciaries and long-term investors, we recognize that more efficient use of the energy we already produce is one of the fastest, easiest and cheapest ways to significantly reduce emissions and improve the bottom line of many companies in which we invest, especially with demand for energy increasing. Efficiency should be the "fuel of first choice." Additionally, this economic recovery package should include substantial funding for vital energy efficiency programs – such as retrofitting buildings – through

which the U.S. can reap the greatest gains from efficiency, create jobs, save substantial amounts of energy, reduce the burden on the nation's aging electric system, and save money. We also recommend that federal funds flow to states that allow utilities to treat energy efficiency comparable to new supply; states that adopt energy efficiency resources standards to achieve energy savings goals; or, states that adopt strong building codes to encourage energy savings.

In terms of the aging grid, part of the funding in this stimulus package should be directed toward modernizing and improving the electric grid system. This will move us toward a more stable and secure 21st century transmission and distribution system that is integrated with modern communications and information technology.

With the dire economic conditions we are facing, this is no time to fail to pass this critical legislation and thereby interrupt the greatest economic growth and job creation potential the U.S. market faces. We appreciate your attention to these matters.

Sincerely,
