

Climate Change is here now – so what can you do?

Dr. Richard Somerville, Scripps Inst. of Oceanography, IPCC

- It's warming.
- It's us.
- It hasn't stopped.
- The heat is mainly in the sea.
- Sea level is rising.
- Ice is shrinking.
- CO₂ makes the sea more acidic.
- CO₂ in the air is up 40% since the 1800s.
- It's now the highest in 800,000 years.
- Cumulative emissions set the warming.
- Reducing emissions limits the warming.
- Climate change will last for centuries.

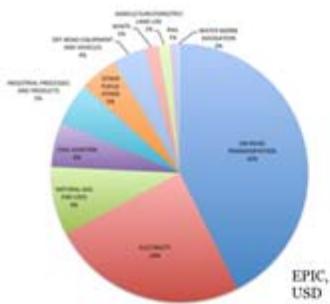

Primary Impacts in San Diego County

- It will be hotter
- It will be drier
- Longer and more intense fire season
- Stronger rain events and flooding
- The sea will rise and bluffs erode

Greenhouse Gas Emissions by Category - San Diego Co.

Transportation and Electricity use account for 2/3rds of our Carbon Emissions

So what can you do?

- At Home
- At the office or your business
- If you own real estate
- In your community and city
- In our world
